EDUCATION

Stevens Institute of Technology

Hoboken, NJ

Bachelor of Engineering in Mechanical Engineering — Cumulative GPA 3.8/4.0

May 2029

Courses: Mechanics, Thermodynamics, Statics, Circuits and Systems, Electricity and Magnetism

EXPERIENCE

Field Intern

Jun 2026 – Aug 2026

Hunter Roberts Construction Group

New York, NY

- Prepared monthly owner reports by consolidating financial updates, construction progress photos, and critical project milestones to provide accurate project status updates.
- Managed the coordination of RFIs and Submittals by communicating with subcontractors, consultants, and project teams to facilitate timely document review and approval.
- Coordinated with subcontractors to obtain and verify supporting documentation for change orders and payment applications, contributing to accurate cost tracking and efficient project execution.

Project Engineer Intern

Jan 2026 - May 2026

New Line Structures

New York, NY

- Performed detailed quantity takeoffs using Bluebeam for structural and civil scopes across multiple active and pre-bid projects.
- Conducted site visits to document and report construction progress, coordinating field observations with the project team.
- Maintained accurate documentation of engineering drawings and specifications for active projects using Procore.

Advanced Robotics Manipulator Lab Research Assistant

Jan 2025 -Aug 2025

Stevens Institute of Technology

Hoboken, NJ

- Analyzed and implemented mechanical design optimizations using Solidworks, improving accuracy and precision.
- Integrated torque sensor to enhance position measurement accuracy for improved experimental data reliability.
- Collaborated with a research partner on the robotic surgical continuum instrument project to better understand the inner mechanics.

PROJECTS

Smart Boat Pool Navigation System | C++, Arduino, SolidWork

Jan 2025 - May 2025

- Collaborated in a multidisciplinary team to build a fully functional autonomous boat capable of navigating an arena within 5 minutes.
- Designed and modeled all major components of the boat using SolidWorks, then 3D printed them using FlashPrint to finalize parts for full-scale assembly.
- Led the development and integration of the boat's electronic systems, including wiring, motor control, and power supply setup.

Automated Plant Watering System | C++, Arduino, SolidWork

Sep 2024 - Dec 2024

- Collaborated with a team of three in order to build an automated plant watering system capable of watering the plant based on the humidity of the soil.
- Designed the system's structure using SolidWorks and prepared 3D-printable models using FlashPrint.
- Developed the electronic control system with an Arduino board, integrating sensors to monitor soil moisture and automate watering.

TECHNICAL SKILLS

Software: Procore, Autodesk, Microsoft Office, BlueBeam, Excel, SolidWork, OnShape

Certification: OSHA 30
